

# Different types of Energy

- 1) Collectively brainstorm terms for different types of energy
  
- 2) In groups: What sources of energy do you know? Categorize them into sustainable energy sources, and conventional (unsustainable) energy sources. What benefits and disadvantages are there with the different sources? Use the tables “Energi1” and “Energi2”
  
- 3) Summarize the tables collectively.  
Further discussion:
  - a. What type of energy will be used in the future? Why?
  - b. When we already have alternatives to fossil fuels, why are they not more commonly used?
